Title: Megawatt scale axial sCO ₂ turbine flow path enhancements to improve off-design performance		
Research Objectives: (1) To explore the optimisation of the turbine flow path including inlet chamber, flow path, gland seals, tip seals and diffuser to maximise the performance of the machine. (2) To assess and quantify secondary losses in sCO ₂ turbines and investigate the impact of low aspect ratio blading. (3) To evaluate strategies to enhance the mechanical and rotordynamic integrity of highly loaded blades. (4) To produce off-design performance maps for the optimised flow path
